

Gerab System Solutions

# DIGITAL INFRASTRUCTURE SOLUTIONS

Delivering smart and reliable digital infrastructure to keep you ahead of competition.

Delivering applications through secure servers, with mobility and reliable access, allowing customers to achieve enhanced business outcomes. Our methodology utilizes specific gap analysis engagements in the form of assessments. Our experts take into account the current state our clients' infrastructure is in and their business requirements or expectations to build technological solutions for their organizations.

## Software defined Datacenter

Computing, Storage, Virtualization, OS: Windows, Linux and Unix Platform

## Wireless & Networking

Switching, Routing, Firewall, VPN, Wireless Access Point

## Digital Workspace Solutions

Unified Communication, Virtual Desktop, Cloud CRM, Microsoft Exchange

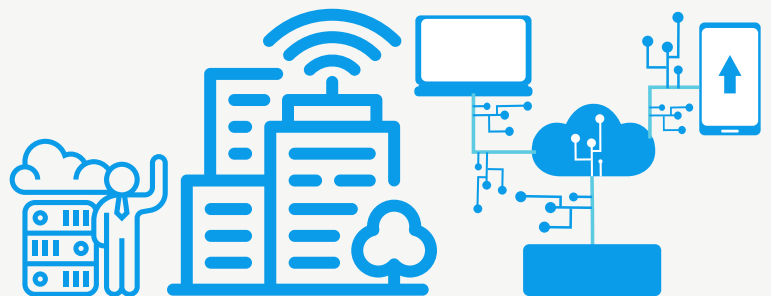

Our methodology utilizes specific gap analysis engagements in the form of assessments. Our experts take into account the current state our clients' infrastructure is in and their business requirements or expectations to build technological solutions for their organizations.

The technical services team members prepare an assessment report to develop plans to integrate, migrate and activate key components of our customers' Digital Infrastructure technologies. Our team is composed of experts who have worked on projects of all types and scales. We maintain the highest-level of certifications and stay ahead of the game with the goal of continually elevating our customers' ability to do business.

## Prepare for the future.

*We design, build and manage, agile & secure Digital Infrastructure solutions to accelerate business transformation while delivering exceptional value to our customers.*

Digital Infrastructure growth has become a necessity to match the needs of organizations. At Gerab, we help you transform your data center with our comprehensive approach to SDDC solutions that are standardized, secured, scalable, automated and highly resilient.
